

FAQ

NR: 038

HARDWARE: DREHTELLER

HOLDERS / ACCESSORIES

What should be noted for the shoe holder?

To be able to screw the supplied screw into the shoe, we recommend to drill a hole in the shoe. Prior to the drilling of the hole for the screw, it is important to find the center of the shoe. The easiest way you can do that if you draw a center line on a sheet of A4 paper. Position the shoe with the heel center and the front of the line. the line shows them on the front, where you have to drill.

Do you have the shoe on the holder mounted and adjusted the degrees of slop you can determine, the rotation axis exactly, by adjust the x and y axis.
