

# FAQ

NR: 046

SOFTWARE: RAWCONVERTER

## What do I need the script for?

The script automates the workflow. Incoming pictures are processed immediately with the preset settings and developed in the selected Output folder. If you start the 3D-VIZ TOOL before the photographing process the Output folder specified in Capture One reacts as Hotfolder. The 3D-VIZ TOOL monitors this Hotfolder and after the input of the last photograph automatically begins to complete the animation.
